Uniformity

Block uniformity on the QIAquant 96 and QIAquant 384. Amplification curves **A** and melting curves **B** of respectively 96 and 384 replicates on QIAquant 96 and QIAquant 384. Real-time PCR was done using 100 ng of *E.coli* DNA in each of the 96 and 384 block positions. **(A)** Amplification curves of a 300 bp amplicon of the 16S using QuantiNova SYBR® Green PCR Kit. **(B)** melting curve analysis of the amplicons. Low variation of C_q values ($SD < 0.2$) and T_m of the melt curves ($SD < 0.1$) demonstrate demonstrated temperature uniformity across the block of the QIAquant 96 and QIAquant 384.

Confident resolution of 1.5-fold dilutions. *E. coli* 16S was amplified from a 1.5-fold dilution series with template concentration ranging from 0.173 ng to 10 ng using QuantiNova SYBR® Green PCR Kit, in duplicates. Results show clear discrimination of the different dilutions for precise and confident quantification.
